The Original Adaptable Class III Mask

Standard and Pedo Size Available

Order No.
REF 155-122 - Standard Mask
REF 155-121 - Pedo Mask
Single use only

Adaptable Class III Mask

Dr. Henri Petit

- Made in U.S.A.
- Best Quality Materials and Workmanship
- Designed and Approved by Dr. Henri Petit

Gel liner for forehead and chip cup maximizes comfort (LATEX FREE)

Washable, reusable gel liner effectively reduces:

- Friction
- Shear Force
- Abrasion
- Pressure

Forehead Rest

- Patient comfort is maximized with ample coverage for stability and heavy force diffusion.
- Shatter-resistant high-impact ABS plastic.

Mouthbow

- Looped ends for patient safety.
- Radial locking block is repeatedly adjustable from low to high pull.
- Welded crossbar.

Chin Cup

- Peripheral design offers laterally extended coverage to diffuse force over the mandible while avoiding the soft area near the lip and under the chin.

Main Frame

- Arc of opening bend in lower portion simplifies adjustment.
- Length adjustable at both ends, utilizing the forehead rest Slide/Lok and chin cup guide position.
- Adjustable Pedo Size 3-1/2"-6"*
- Adjustable Standard size 5-1/2"x7"*

**Measured from center of forehead to point of chin*

IMPORTANT REMINDER FOR DOCTORS!
To avoid risk of eye injury, be sure to inform patients and parents about proper safety precautions when placing and removing headgear. Also caution patients against rough or risky play while headgear is in place.

Versatile

The protocols for many orthopedic facial mask treatment of Class III cases require very heavy forces to be applied to the craniofacial complex. In these cases, the Adaptable Class III Mask is the ideal choice. Elastics with combined force levels from 2 to 16 pounds couple the face mask to an intraoral appliance (s) to elicit forward movement of the maxilla as a whole, rotation of the maxillary pyramid, or "dental drawer" movement of both arches.

High forward through downward pull is available through adjustment of the mouthbow position with the forehead rest locked and the chin cup free to slide. The Slide/Lok feature of the headrest and chin cup build in an option to increase downward pull. You can lock the chin cup near the bottom of the frame and unlock the headrest. Have patient close and adjust mouthbow for angle of pull. Upon opening or talking, a strong downward force is applied as the headrest remains stationary and the remainder of the mask is mobile.

Recommended sizing: This mask naturally adjusts to the proper fit and comfortable slide for the patients profile, reducing friction when speaking. Loosen the headrest *and* chin cup while holding the mask to the face; have the patient open and close their mouth. Tighten the component (chin or headrest) that binds, leaving the other free to slide. Align the crossbar (which holds the elastics) for appropriate angle for force, and tighten.

Warning: Do not place padding on an open wound. If irritation or discomfort occurs, instruct patient to discontinue use and notify dentist immediately. If padding becomes wet while being worn, it can be wiped with a dry cloth and lightly dusted with talcum powder, if desired.

Elastics Available - #76 1/2" 16oz. recommended
*See website for sale restrictions.
Most metal replacement parts are available - call for price quote.
Gel liner forehead and chin cup replacements available (per set).
(A superior alternative to conventional padding, the gel liner is designed to effectively reduce friction, shear force, abrasion, shock, vibration and pressure. The padding can be washed with mild soap and lukewarm water.)

Returns after 30 days are subject to a 15% restocking charge unless the item is damaged in shipping or shipped in error. This does not apply to custom made devices.

Durable, zipper-close headgear case available in black.
Order No. 830.
