

PACKING WORK MODELS & BITE REGISTRATIONS FOR THE LABORATORY

ENSURING SAFE DELIVERY OF MODELS AND BITES

It is essential to carefully pack models and bite registrations to avoid damage during shipping which could result in fabrication and treatment delays. Great Lakes packing material ensures that your models and bites arrive safely at our Laboratory.

Shipping supplies include:

- > Shipping box (1)
- > Foam sheets (2)
Top and bottom
- > Custom foam insert (1)
- > Mailing labels (3)

The Great Lakes shipping box and packing materials will arrive assembled. Remove the top foam sheet to pack the models and bite registration.

Place the bite registration in the bite cut out. Place the models in the right and left model cut outs with the arch facing up. Place the completed Rx form on top of the foam insert and replace the top foam sheet.

Tape the box lid closed. Apply the pre-paid mailing label. The package is ready to ship. There should be no movement in the box during shipping.

HELPFUL TIPS:

- Stone models are preferred
- Write the patient's name on the model base or mounting
- Complete the Rx and include it in the shipping box
- To avoid damage in transit, Great Lakes does not recommend sending a bite fork

ADDITIONAL INSTRUCTIONAL MATERIALS:

Contact a Great Lakes Technical Support Specialist to request the following:

- > Impression Taking and Work Model Instructions
- > Lucia Jig Centric Relation Bite Registration Guide
- > Splint Appliance Selection Guide
